

Turf mixtures

Jolly

Good wear tolerance and high aesthetic value. It suits almost any environment, from sunny to medium shady. Easy maintenance.

55% *Festuca rubra*
30% *Lolium perenne*
10% *Poa pratensis*
5% *Agrostis tenuis*

Uses: Recreational and ornamental.
Seeding rate: 30-40 g/mq.

Soleado

Suitable for medium texture, not too clayey soils in sunny climates. It requires frequent watering. It forms a very dense and fine lawn. It is recommended on weed-free soils, since it germinates slowly.

50% *Festuca rubra*
15% *Poa pratensis*
15% *Festuca ovina*
10% *Agrostis tenuis*
10% *Festuca rubra trichophylla*

Uses: Recreational and ornamental.
Seeding rate: 20-30 g/mq.

Polo

It germinates and roots very quickly. If water supply and temperature are adequate, it is already green a week after being sown, and it covers the ground two weeks after being sown. It is recommended on good texture soils rich in organic content. It keeps a pleasant and intense green colour throughout winter. It does not require frequent mowings.

60% *Lolium perenne*
20% *Festuca rubra fallax*
20% *Poa pratensis*

Uses: Sport fields, recreational, sod.
Seeding rate: 25-40 g/mq.

Extra fine

High decorative value. It requires great care and frequent watering. It also requires frequent mowings even if it grows very slowly since it must be mowed short to express its qualities - extreme fineness and density - at its best.

55% *Festuca rubra fallax*
40% *Poa pratensis*
5% *Agrostis stolonifera*

Uses: Ornamental.
Seeding rate: 20-30 g/mq.

Standard

Suitable for large surfaces which have a turfing purpose rather than a decorative one.

50% *Lolium perenne*
45% *Festuca rubra*
3% *Poa pratensis*
2% *Agrostis tenuis*

Uses: Recreational.
Seeding rate: 30-40 g/mq.

Sport

It combines high wear tolerance with frequent mowings tolerance. Leaves are quite coarse. It is suitable for soccer and rugby fields.

60% *Festuca arundinacea*
25% *Lolium perenne*
10% *Poa pratensis*
5% *Festuca rubra*

Uses: Sport fields.
Seeding rate: 30-50 g/mq.

Sport Extra

The Extra mixture consists of finer varieties than the Sport mixture.

60% *Festuca arundinacea*
25% *Lolium perenne*
10% *Poa pratensis*
5% *Festuca rubra*

Uses: Sport fields.
Seeding rate: 30-50 g/mq.

Ombra

This mixture includes the most shadow tolerant species. It is best on loose soils. It has high water requirements. It emerges from the soil quite slowly, therefore, if it is necessary to get a green lawn quickly, it is advisable to add 10 g/m² of perennial ryegrass during sowing. The perennial ryegrass will die after a few months, leaving its place to the other components of the mixture.

30% *Festuca rubra fallax*
30% *Poa trivialis*
20% *Festuca ovina*
10% *Agrostis tenuis*
10% *Festuca rubra trichophylla*

Uses: Shady areas.
Seeding rate: 20-30 g/mq.

Mar Tirreno

Very rustic and water stress resistant. Its components are dark green varieties. It is suitable for hot and dry climates.

40% *Festuca arundinacea*
35% *Festuca arundinacea*
15% *Lolium perenne*
10% *Poa pratensis*

Uses: Recreational, sod.
Seeding rate: 30-50 g/mq.
